To Whom It May Concern:

I am writing on behalf of our company Arbuckle Communications, LLC regarding the petitions filed by CTIA and T-Mobile requesting proposed changes to the CBRS band. We strongly oppose the changes and would like to take this opportunity to share how this would be devastating to our network and the Businesses and Residents of our community.

We are a Telecommunications Provider located in Southern Oklahoma that has been deeply rooted in our communities since we were originally founded in 1931. Throughout the many years of providing products and services to Businesses and Residents in our area, we have adapted our product offerings to stay relevant to our customers needs over time. Arbuckle Communications became an Internet Provider in 1998 and a Wireless Internet Service Provider (WISP) in 2005. Our customers have always been and will always be our "Top-Priority." We currently serve nearly 4,000 Business and Residential Customers in Southern Oklahoma and have plans to extend our network and continue to grow. Our coverage area encompasses over 6,000 square miles and provides service to many customers that without us would not have any other High-Speed Internet Options. Our network is currently able to deliver speeds up to 100Mb on a Dedicated Bandwidth Plan while our Standard Residential Plans deliver 10Mb Download with the ability to burst up to 50Mb. We do this all while providing our customers No Contracts and Unlimited Data Usage.

Our company was one of the Early-Adopters in the 3650-3700 MHz Band. We were originally granted our NN 3650-3700 MHz License from the Federal Communications Commission on January 19, 2011. We have built the backbone of our network using this 50 MHz of Spectrum since that time. Since 2011 we have invested over \$750,000 dollars in this Band without any Government Subsidies. We currently have 70 Cambium 450 3.65 Access Points and 16 Cambium 320 WiMax Access Points serving nearly 1,500 Business and Residential Customers in our market.

We have continued to deploy our 3.65 product over the last six years in hopes of eventually not only being able to continue to use the 50 MHz we already occupy, but to also gain access to the additional 100 MHz that could become available for us to use. This additional spectrum would immediately give us the ability to upgrade our existing Wireless Access Points that would ultimately provide faster packages for our customers. At the end of the day every upgrade we do to our Network is to continue to support the Businesses and Residents of Southern Oklahoma.

We have and will continue to provide the fastest, most-reliable, and best customer service to our clients. The CBRS Band is essential to help us continue to do this.

We adamantly oppose any changes you would consider regarding the CBRS Band. We ask that you please give us the opportunity to continue to provide solutions for our customers in these Rural Markets that would not have any other quality options. Please say NO to the petitions and NO to the changes CTIA and T-Mobile are requesting.

Sincerely,

Duane Scott Pope
